Powerful Tools Eliminate Barriers to Rapid, Cost-Effective App Development

Building versatile GIS applications can be complex and costly. VertiGIS Studio, a commercial off-the-shelf software suite, simplifies the design, deployment, and maintenance of apps by 2-3x while making it easy to adapt user interfaces and background processes to meet specific needs.

This seamless individualization allows users to focus on their everyday business challenges with tools tailored precisely to their requirements, available exactly where they need them—whether in a web browser, on a mobile device, or within ArcGIS Pro.

Engineered to Satisfy Users and Deliver Results

VertiGIS Studio transforms GIS data into business-focused results, enabling organizations to operate efficiently, communicate effectively, and model business processes. This one-of-a-kind productivity tool delivers several key advantages:

Human-centric technology:

VertiGIS Studio's user-focused design philosophy helps you maximize the value of geospatial data with user-friendly tools, while enhancing skills, knowledge, and creativity through intuitive automation and data unification.

Always compatible with ArcGIS:

Stay ahead of change with ArcGIS platform's continuous updates, leveraging new and emerging Esri technology to minimize risks of future tech changes.

Unparalleled configurability and flexibility:

Its low-code framework supports adaptable app development tailored to your processes and business needs, often eliminating the need for custom code. With hundreds of out-of-the-box tools, it significantly reduces development time and resources.

Core Features that Empower Your GIS Environment

Create GIS applications that truly drive your business forward. With VertiGIS Studio, you get more than tools; you get solutions tailored for lasting impact.

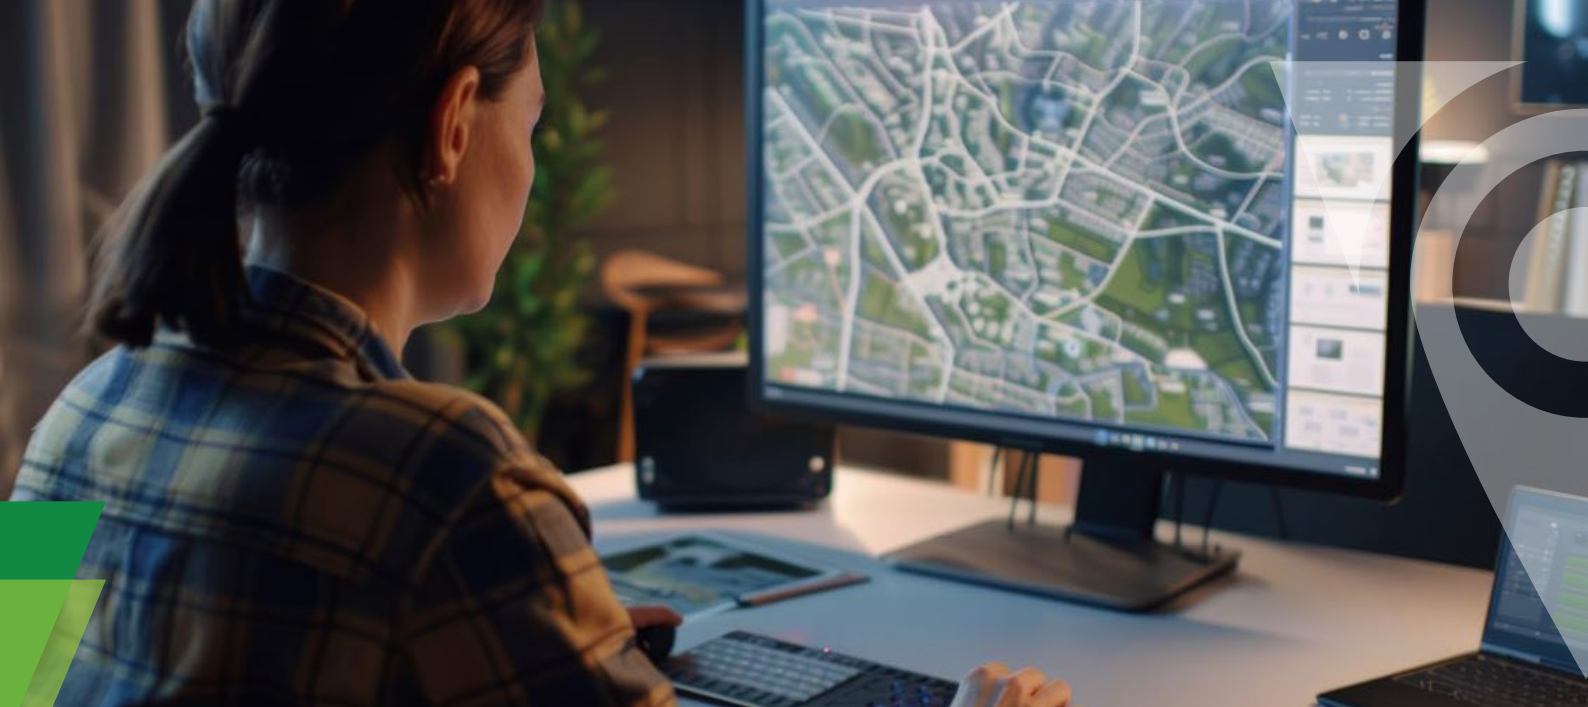

- Effortless integrations of data from enterprise systems like SAP into your GIS, maintaining seamless information continuity without long development timelines or high costs.
- Unbeatable ROI because VertiGIS Studio is already built for you, fully tested and development costs are amortized across thousands of organizations worldwide.
- Guided interactions increase user adoption and reduce costly training challenges with step-by-step, wizard-like workflows tailored to your processes.
- Powerful reporting for your apps. Quickly extract data from enterprise systems and publish it in your preferred format. From audit-ready regulatory reports to information products with tables, images, and maps—it's all at your fingertips!
- Enhanced security ensures secure access by controlling map layers, services, attributes, and geographic data—allowing only authorized users to view specific information without duplicating map services.

Unleash Productivity with Next Level, Professional Grade Tools for App Builders

VertiGIS Studio ensures you can easily build and maintain impactful applications while layering on functionality as your needs evolve.

- **Automation:** Simplify complex tasks, like identifying retail locations, with back-office automation.
- **Data Linking:** Access a consolidated, accurate view by linking data across systems and pulling it only when needed.
- **Charts & Dashboards:** Seamlessly create visual reports using dashboards, KPI cards, and integrated map visualizations.
- **High-Quality Printing:** Produce professional-grade PDFs and printed documents in high resolution.
- **Enhanced Search:** Enjoy advanced suggestions and enterprise-grade search within ArcGIS for a richer experience.
- **Accessibility:** Benefit from built-in web and mobile features that meet W3C and WCAG 2.0 AA standards, ensuring inclusiveness.
- **User Experience Analytics:** Track and refine user interactions to continually improve applications.

Why Choose VertiGIS Studio?

VertiGIS Studio provides simplicity without compromise. It is designed to work seamlessly with Esri's ArcGIS technology, it streamlines application building, maintenance, and optimization so you can focus on delivering real value. With VertiGIS Studio, you'll have the tools and flexibility needed to enhance workflows, improve decision-making, and drive meaningful results. The full VertiGIS Studio suite includes:

- **Application Frameworks** – the user interface that brings everything together for the end user in a web browser, on a mobile device, or on the desktop.
- **Application Components** – the additional capabilities your application requires to solve business problems such as guided interactions for users, business system integrations, well formatted reports, WYSIWYG map printing, and fast pre-indexed searching with suggestions.
- **Enterprise Support** – the supporting tools required to ensure overall success of an application including data security that ensures each user sees only what they should, monitoring and reporting on how your users experience the application, and tools to simplify working with application related items in an Esri portal.

A Technology Partner You Can Trust

Eliminate the risk of unknowns by outsourcing complexity to our seasoned team of industry experts. With our unwavering commitment to innovation, your investment is protected by technology that evolves with your needs.
